MODEL 96 Quartz Watchmans Clock

HOW THE SYSTEM WORKS...

Security personnel carries the Model 96 on each round. At each station the numbered key is inserted into the Model 96 and rotated one turn. This rotation records inside Model 96, on a paper tape, the exact time and number of the patrol point visited.

Daily a security supervisor should open Model 96 and remove the printed paper tape record of all patrol station points visited by security personnel during the previous day.

Accurate
Quartz Time
Control
